Category:Computer-aided design software Category:Computer-aided design software for LinuxA novel switchable pH-responsive micelle platform for rapid and controlled targeted delivery of pH-triggered drug release. A novel switchable pH-responsive micelle platform for the rapid and controlled delivery of pH-triggered drug release was prepared by utilizing a  $\beta$ -cyclodextrin-carboxymethylcellulose hydrogel. The micelle, which could be triggered by pH, exhibited a globular morphology at physiological pH and a fibrous morphology at acidic pH. The micelle could efficiently encapsulate hydrophobic drugs, such as camptothecin, doxorubicin, and sulforhodamine B, and the loaded drugs were released by a pH-triggered, micelle-disassembled mechanism in a time-dependent manner. The micelle formed in vivo was retained in the liver for more than 5 h.1. Field of the Invention The present invention relates to a pneumatic brake control apparatus for motor vehicles, which is suitable for use in application to a vehicle having at least two wheel brakes or in application to a motor vehicle having four wheel brakes. 2.
